PRAJAPULSE

Rewards System Workflow

From verified civic action to funded rewards and citizen withdrawals

THE CORE FLOW

Civic action → Evidence verification → Points approval → Reward wallet → Funding check → Withdrawal → Payout reconciliation

Design principle

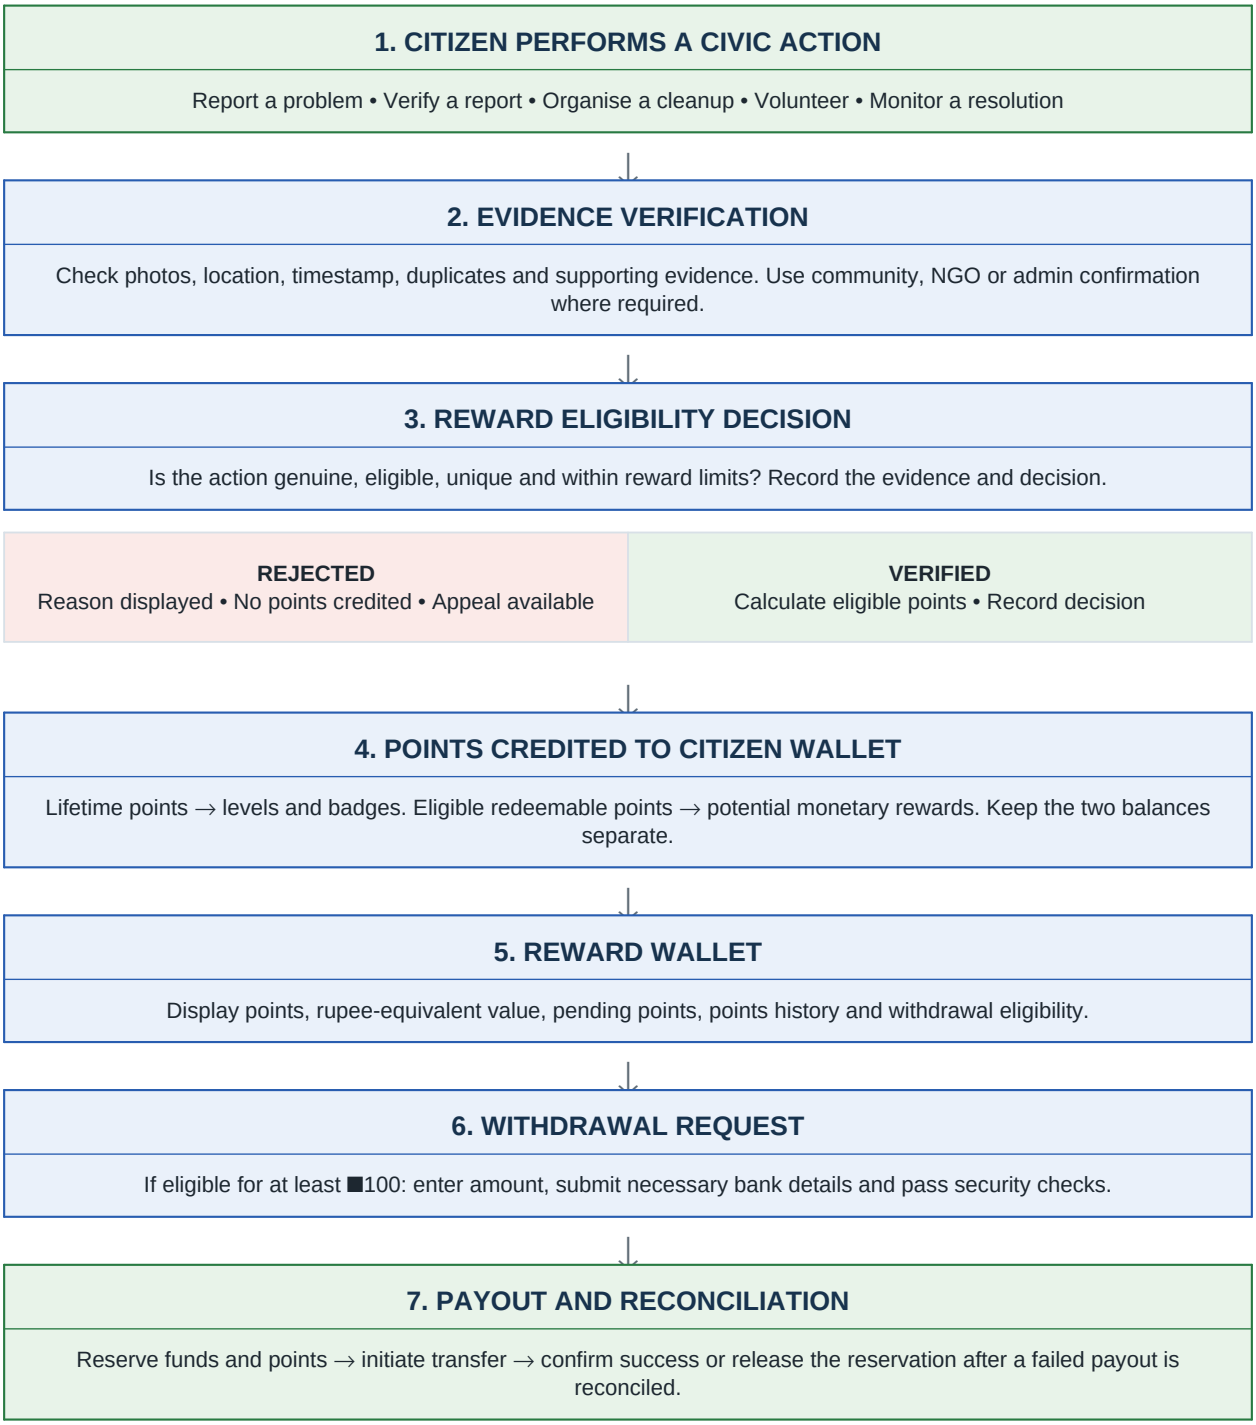
Citizens earn points for genuine, verified contributions. Cash rewards are payable only when the points are eligible for redemption and sufficient cleared funds are available under the relevant funding rules.

Prototype recommendation

Demonstrate the complete workflow with simulated money first. Add real bank payouts only after the funding, legal, tax, KYC and payment-provider arrangements have been reviewed.

WORKFLOW DESIGN • HACKATHON MVP

1. End-to-End Rewards Workflow

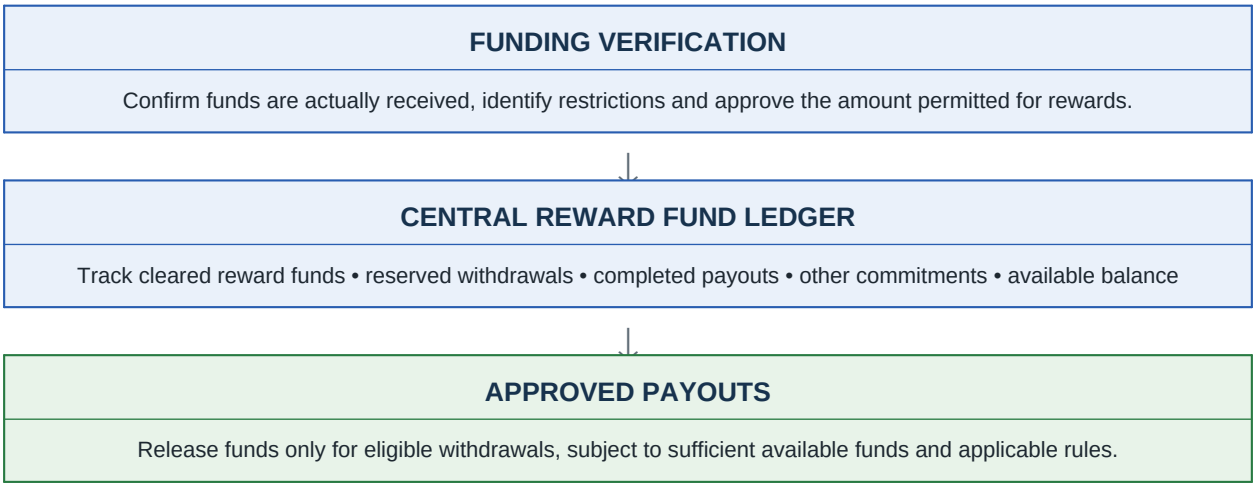


AI should assist verification, not be the sole authority for rejecting citizens or approving cash rewards. Uncertain or high-risk cases should be routed to a human or trusted partner.

2. Funding Sources and Central Reward Fund

Different funding sources enter the system, but they do not automatically become unrestricted reward money. Record each source, its conditions and the amount explicitly allocated to eligible rewards.

FUNDING SOURCE	POSSIBLE USE / CONTROL
Government grants	Use only for expenses permitted by the specific grant. Do not allocate to cash rewards unless expressly allowed.
Corporate CSR	Use under an approved project budget and the relevant implementing and compliance arrangements.
Company / NGO sponsorships	Track cash contributions separately from in-kind supplies, vouchers or services.
Paid promotions	Track collected revenue and subtract relevant costs before allocating net revenue to rewards.



Critical distinction: the ledger records money; it is not the money itself. Actual funds must be held through an appropriate bank or payment arrangement by the legally responsible organisation. Expected funding must not be treated as cleared cash.

3. Points Calculation and Cash Conversion

A. Calculate contribution points

Use the proposed contribution-scoring formula only after the action passes verification and eligibility checks:

$$P = \min(C, B + A \times V + S) \times D$$

TERM	MEANING
B	Base contribution points for the verified effort.
V	Public-value score (proposed range 0–40).
A	Additionality factor (proposed range 0.5–1.0).
S	Sustained-impact bonus (proposed range 0–20).
D	Duplication/repetition factor (0–1).
C	Category-specific maximum points.

B. Convert redeemable points into monetary value

Proposed conversion rate: 250 redeemable points = ■20, so one redeemable point represents ■0.08. This rate is a proposal, not a guarantee of payment.

REDEEMABLE POINTS	VALUE	WITHDRAWAL STATUS
250	■20	Below minimum
750	■60	Below minimum
1,250	■100	Meets minimum
2,500	■200	Meets minimum
5,000	■400	Meets minimum

Keep two balances: lifetime achievement points are used for levels and badges; redeemable points are eligible for conversion under the funded reward programme. A citizen's lifetime points do not automatically create a cash liability.

4. Withdrawal and Bank-Payout Workflow

1. REQUEST

Citizen opens the reward wallet and requests a withdrawal.

↓

2. BALANCE CHECK

Confirm the redeemable balance meets the ■100 minimum and the requested amount is within the user's eligible balance.

↓

3. FUNDING CHECK

Confirm cleared, uncommitted reward funds are sufficient. If not, do not approve an unfunded payout.

↓

4. SECURITY CHECK

Validate the request and necessary bank details. Do not request bank passwords, ATM PINs or OTPs.

↓

5. RESERVE

Temporarily reserve the relevant points and cash to prevent double spending.

↓

6. TRANSFER

Use an appropriate bank or payout-provider arrangement and record the transaction reference and status.

↓

7. RECONCILE

On confirmed success, finalise the deduction. On failure, release reservations only after checking the transaction outcome.

Suggested withdrawal statuses

STATUS	MEANING
Submitted	Request received; checks have not finished.
Under review	Security, eligibility or funding checks are pending.
Processing	Funds and points are reserved; transfer is being processed.
Successful	Payment is confirmed and the ledger is reconciled.
Failed / cancelled	Outcome checked; reservations are released when safe to do so.

5. Essential System Controls

Verification

Only genuine, eligible and sufficiently evidenced actions can earn points.

Duplicate prevention

One eligible action must not be rewarded multiple times; use unique action IDs and duplicate checks.

Appeals

Show a reason for rejection or reversal and provide a defined appeal process.

Funding restrictions

Track each source separately and allocate only funds permitted for rewards.

No double spending

Reserve points and cash during a pending withdrawal.

Audit trail

Record points credits, reversals, approvals, fund movements and payout references.

Privacy and security

Collect only necessary bank information, restrict access and protect sensitive records.

Human review

AI flags should support review; an AI flag alone should not be treated as proof of fraud.

6. Hackathon MVP: Build These Six Modules

MODULE	WHAT IT DOES
1. Civic action and evidence	Collect reports, photos, locations, timestamps and cleanup evidence.
2. Verification dashboard	Review submissions, inspect duplicate flags and approve or reject actions.
3. Points engine	Calculate points, enforce caps and maintain separate achievement and redeemable balances.
4. Funding and reward ledger	Track funding commitments, receipts, permitted allocations, reserves and payouts.
5. Withdrawal management	Simulate requests and payment statuses without transferring real money in the demo.
6. Admin reports	Show funding received, rewards pending, approved rewards, completed payouts and available funds.

RECOMMENDED MVP APPROACH

Use simulated money to demonstrate the full journey: a verified action earns points, the wallet calculates eligible value, the ledger checks available funds, and a withdrawal is approved or blocked correctly. Integrate real bank payouts only after the required funding and compliance arrangements are established.

Before real-money launch

Confirm the reward conversion terms, source-specific funding restrictions, legal and tax treatment, KYC requirements, privacy controls and payout-provider requirements with qualified advisers and the responsible financial partners.

PRAJAPULSE

Rewards Catalogue & How Citizens Earn

Purpose: Make it clear which civic activities earn points, what a citizen receives in return, and which reward options are planned for later.

Important launch rule

At launch, verified actions earn **recognition points, levels, badges and certificates** — not cash. Redemption options are a possible Phase 2 feature and must be reviewed for funding, legal, tax, privacy and partner requirements before being offered.

1. Kinds of rewards

Reward type	What the citizen gets	When / how it is earned
Points	Points credited to the citizen's account after verification. Lifetime points build status; available points are for any future approved redemption.	Complete an eligible civic activity and submit evidence that passes review.
Levels	Bronze, Silver, Gold, Platinum and Legend status, based on lifetime points.	Bronze: 0–99; Silver: 100–299; Gold: 300–749; Platinum: 750–1,999; Legend: 2,000+.
Badges	Permanent profile badges that recognize specific achievements.	Reach a published milestone, such as 100 lifetime points, two cleanups organized, or five cleanups attended.
Certificates	Downloadable digital certificates for selected milestones.	Reach a milestone for which PrajaPulse issues a certificate.
Public recognition	Optional honor-roll listing, leaderboard placement, featured story, or a thank-you message from an NGO/ward partner.	Earn qualifying achievements or be selected for a verified impact story. Public display should require consent and allow opt-out.
Training / event access (Phase 2)	Possible access to NGO-led training or priority selection for popular volunteer events.	Only if partner capacity and published eligibility rules allow it.
NGO donation (Phase 2)	Possible conversion of eligible points into a donation to a verified NGO.	Only after NGO agreement and legal/tax/funding review.
Discounts / vouchers / cash (not at launch)	Possible partner-funded benefits; cash is not promised by the current launch design.	Would require a confirmed partner or cleared reward funding, published conversion terms, and legal, tax, KYC and payout checks.

Points are not money at launch. Lifetime points determine levels and badges; spending points in a future redemption programme should not reduce a citizen's lifetime achievement level.

2. How people earn points

The figures below are **proposed values** from the rewards design and must be confirmed before launch. Points are awarded only after an action is verified. Duplicate, false, or ineligible activity does not earn points.

Activity	Verified action / evidence	Proposed points
Report a civic issue	A unique report is confirmed as genuine and eligible.	20
Add a clear photo	Photo clearly matches the reported issue.	+10
Provide accurate location	Location is confirmed as correct.	+5
Verify another person's report	Submit a site photo that helps verify a report; no self-verification.	2 per report; max 10/day
Organize a cleanup	Verified event actually takes place.	40
Mobilize volunteers	At least five verified volunteers attend the cleanup.	+15 per qualifying event
Document a cleanup fully	Submit before/after photos and the waste total.	+10 per qualifying event
Attend a verified cleanup	Attendance is confirmed by organizer and, where applicable, NGO/admin.	20
Monitor an issue	A dated monitoring photo/report is reviewed and confirmed.	10
Confirm sustained resolution	Issue remains resolved after 30 days; once per issue.	+25 bonus
Learning (Phase 2)	Complete a waste-segregation lesson; then pass its quiz.	5 for lesson + 5 for quiz

3. Worked example: one citizen's points

What they do	Calculation	Points
Report a garbage pile; verified report, clear photo and accurate location	20 + 10 + 5	35
Verify two neighbours' reports with site photos	2 × 2	4
Organize a cleanup with six verified volunteers and complete documentation	40 + 15 + 10	65
Total for these verified activities	35 + 4 + 65	104

With 104 lifetime points, the citizen reaches **Silver** (100–299 points). This is an illustrative example, not a guarantee of any cash value or real-world payout.

4. Levels and achievement milestones

Level	Lifetime points	Example benefit / recognition
Bronze	0–99	Basic profile badge
Silver	100–299	May be invited to organize small cleanups
Gold	300–749	Priority access to training places, if offered
Platinum	750–1,999	Eligible for civic-recognition nominations
Legend	2,000+	Honor roll and invitation to annual recognition event, if held

Example badges: Swachh Warrior (100 lifetime points); Community Cleaner (two verified cleanups organized); Volunteer Regular (five verified cleanups attended); Clear Reporter (ten verified reports with quality photos); Ward Mobilizer (20 verified volunteers brought across events); Eyes on the Street (ten verified monitoring reports); Community Watchdog (one issue monitored through its 30-day period).

5. Rules that protect fairness

Rule	What it means for citizens
Verification first	Points remain pending until the report, attendance or event is checked. The app should show the status.
No duplicate rewards	One issue should not generate repeated report points from the same user; duplicate reports may be merged.
Daily cap	Proposed cap: 60 points per user per day, subject to confirmation. Report-verification points are capped at 10/day.
No self-verification	A citizen cannot verify their own report or attendance.
False or misleading reports	Points may be reversed after review and an account may receive a warning. Repeated false reports may pause point earning for 30 days.
Cleanup no-show	No volunteer points are awarded if the person does not attend. Giving advance notice with a reason avoids penalty.
Appeals	A citizen can appeal a rejection or reversal within 14 days; a different admin should review it.
Transparent history	Show the action, date, points, status and reason for any rejection or reversal.

6. How point redemption may work later

The current launch design does not promise money. If a future programme introduces redemption, PrajaPulse must publish the conversion rate and monthly limits, show eligible balances separately, verify funding and eligibility, and record every redemption. NGO donations, training/event benefits, discounts, vouchers or cash require the relevant partner agreements and legal/tax review. Real cash payouts additionally require an appropriate payment arrangement and any required KYC/security checks.

A separate workflow draft proposes an example conversion of 250 redeemable points = ■20 and a ■100 minimum withdrawal. These are **proposals only**, and should not be shown as an active citizen entitlement unless formally approved and funded. Under that example, 1,250 redeemable points would equal ■100, but only if the programme is launched with those terms and sufficient cleared funds.

7. What the app should show

Reward wallet: lifetime points, available points (for any future redemption), pending points, current level and progress to next level, badges earned/in progress, certificates, points history, impact summary, leaderboard opt-out, rules and appeals link.

Launch checklist: Confirm point values and daily cap; verification roles; level benefits; badge rules; appeals process; public-profile consent; point-expiry policy; and legal/tax/funding review before any cash, discount or donation redemption.
